FRONT - NAPE

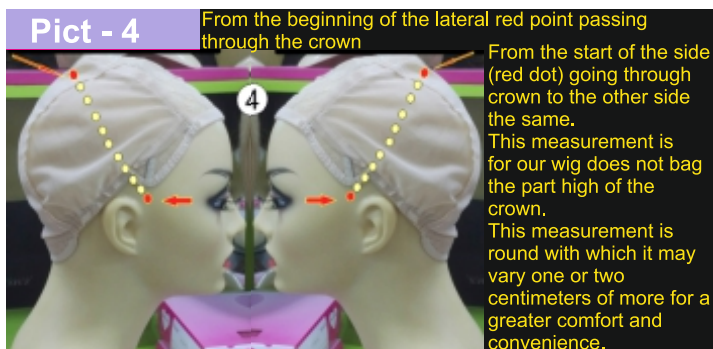

Pict - 3

From the center of our forehead, where the hair begins

IDEAL POINT

From the red dot (like putting on a pair of glasses) to the same side. So that the wig does not disturb it, it will pass behind the ear, we will not measure lower even if we have hair.

FRONTAL

Pict - 4

From the beginning of the lateral red point passing through the crown

From the start of the side (red dot) going through crown to the other side the same. This measurement is for our wig does not bag the part high of the crown. This measurement is round with which it may vary one or two centimeters of more for a greater comfort and convenience.

CROWN

Pict - 5

From the red point, you have to start measuring from where our hair starts behind the ear and straight until reaching the other side the same.

back ears line

HOW TO CARE FOR MY WIG

- 1 - Brushing the wig very gently, if the wig is long we will make sure there is no tangle by brushing gently tip-up.
- 2 - We will turn the wig over to wash the fabric inside first of the wig, we will wet the fabric with water under the tap (warm water) followed by applying moisturizing shampoo, rubbing the fabric gently until white foam comes out, it will mean that we have wash the fabric well.
- 3 - We will turn the wig over and start washing the hair of the wig, we will wet it from the roots to the ends carefully without remove or tangle and very gently we will put again moisturizing shampoo and we will always rub, we will keep washing roots to ends without tangling, when the white foam comes out and in quantity will mean that our wig is well clean we will comb it with a comb and when the comb passes comfortably and no entanglement is detected we can proceed to rinse it.
- 4 - Once well rinsed we will apply a good mask moisturizing and nourishing, we comb our wig again and leave it about 15 minutes. Followed by an abundant rinse with water cold with the stream of the tap from the root and lowering the water by means and tips always respecting not to remove or tangle it.
- 5 - Once well rinsed, we will wrap it in a towel and leave 15 minutes to remove excess water. We will place it in a mannequin and we will apply a BIPHASIC without rinsing so that recover looseness and hydration.

If our wig is curly we will put a little foam well distributed and we can leave it in the open air or dry with a diffuser. If our wig is to comb straight, we will let it dry in the open air until the fabric dries well, when our wig is dry for inside we can proceed to make a hand dryer and smooth the hair of our wig do not forget to put a little bit in each strand of oil serum but be careful if we put a lot of it we can grease it. Putting a little serum in oil is very important for daily use of the wig that way it will always be very soft and hydrated.

If our wig is made with tulle, care must be extreme in that area, we cannot give strong pulling or brushing at the root neither direct heat nor strong blow dryer brushing on tulle is a very beautiful and natural but very very delicate confection and they tear off the hairs very easily if we are not careful. With a wig made entirely by machine there is no problem in the handling the dryer at the root.

The frequency of washing will depend a lot on the use made, between 10 days and a month is the most common. Natural wigs can be dyed, bleached, and even made permanent as long as the hair is of the highest quality, with our wigs you can do any of the aforementioned jobs but very important they should be treated by post-surgery specialists. We know it's hard sometimes so if you don't find any professional you can send your wig to the factory and talk to an advisor brand technician and we will be happy to offer you help and service you need.

LONG NATURAL WIGS

SPECIAL DISCOUNT FOR PATIENTS IN ONCOLOGICAL TREATMENT

Different types of clothing, different sizes, custom modifications: with us you can make all this. We assign you a personal advisor who will help you in the whole process of conveniently choosing your wig. For example, if you send us a picture of you, it will be very easy to choose the right model and the most convenient color. We can use different hats: open ventilated, closed with ventilation and softer, also put some non-slip linings on the sides, make special finishes on the sides with transparent pieces of tulle that will allow us to comb backwards ... etc
